Pasqualino Sorice is a computer engineer specialized in Android (Java) and iOS (Swift) apps development and lately he is working with React Native. Experienced with all stages of the development cycle for dynamic projects. Well-versed in numerous programming languages including Swift, Java, JavaScript, SQL, and Python. Strong background in project management and customer relations. He is a fast learner, and flexible worker and he always gets updated on the last news about development. He is currently in a remote team called BuildTeam that works on a STEEM blockchain. Employed for the last 3 years for a startup called Promo Inside where he sharpened his technical skills on mobile development Android and iOS and where he builds a product called AppMobileRental. He also started a company called Hubern that provides IT consulting.
